WE BEGIN OUR STORY IN NEW YORK.

There once was a girl known by

everyone *and*

no one. Her heart belonged to someone who couldn't stay. They loved each other recklessly. They paid the price. She danced to forget him. He drove past her *street every night. She made friends and enemies. **She only saw him** **in his dreams.*** Then one day he came back. Timing is a funny thing. But everyone was watching. She lost him but she found herself and somehow that was everything.

1. $x^2 + 2x - 3$

2. $A_n = 6n + A_{n-1} + 1$

3. $\int_{13}^{x} x + 2 \, \mathrm{d}x$
